

Ruffed Grouse Society Covered Bridge Chapter

<http://www.gundogalliance.com/rgs/>

April 17, 2010

12:00 noon—4:00 pm

4th Annual Southwestern Pennsylvania Field Day

April 17, 2010, noon until 4:00 pm

In cooperation with the PA Game Commission

Habitat is the most important factor influencing grouse populations. Grouse reach their highest densities in young forests - the brushy stages of growth called early-successional habitat. And, as most hunters know, this is where you go to hunt grouse.

Don't talk about the absence of grouse, do something about it. This is our chance!
